DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, *in combination with other limitations recited in the claims*, the limitations of motor drive including:

an elastic member, which is provided at the coupled portion and sandwiched between said motor shaft and said input shaft, such that said elastic member generates reaction forces in opposite axial directions to push said motor shaft and said input shaft away from each other; wherein the reaction forces of said elastic member act on said motor shaft to push said first bearing member axially thereby pushing said housing.

The Examiner concurs with the applicant's remark that Dow does not disclose or suggest at least an elastic member generating reaction forces in opposite axial directions to push the motor shaft and the input shaft away from each other, and reaction forces of the elastic member act on the motor shaft to push the first bearing member axially, thereby pushing the housing. Dow merely discloses a single shaft for which free endplay is kept to a minimum.

Comparing to the prior-art of the record, none of the prior art references of the record, either stand alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
